The Influence of Weight

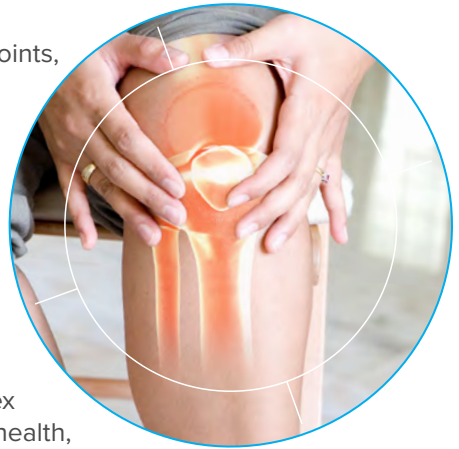

Metabolic effects of excess White Adipose Tissue (WAT)

- When energy intake exceeds energy expenditure, excess energy is accumulated in the body through the expansion of white adipose tissue.
- White adipose tissue acts as an organ, increasing the secretion of adipokines.
- Increased adipokines disrupt homeostasis regulating satiety/hunger, thermogenesis, and nutrient partitioning between tissues to maintain body weight and adiposity.

Joint health effects of White Adipose Tissue (WAT)

- Excess White Adipose Tissue interferes with joint comfort in two ways.
- Excess weight puts added stress on joints, particularly the knees, causing discomfort.
- WAT secretes adipokines linked to inflammation and swelling of the synovial membrane in the joint.

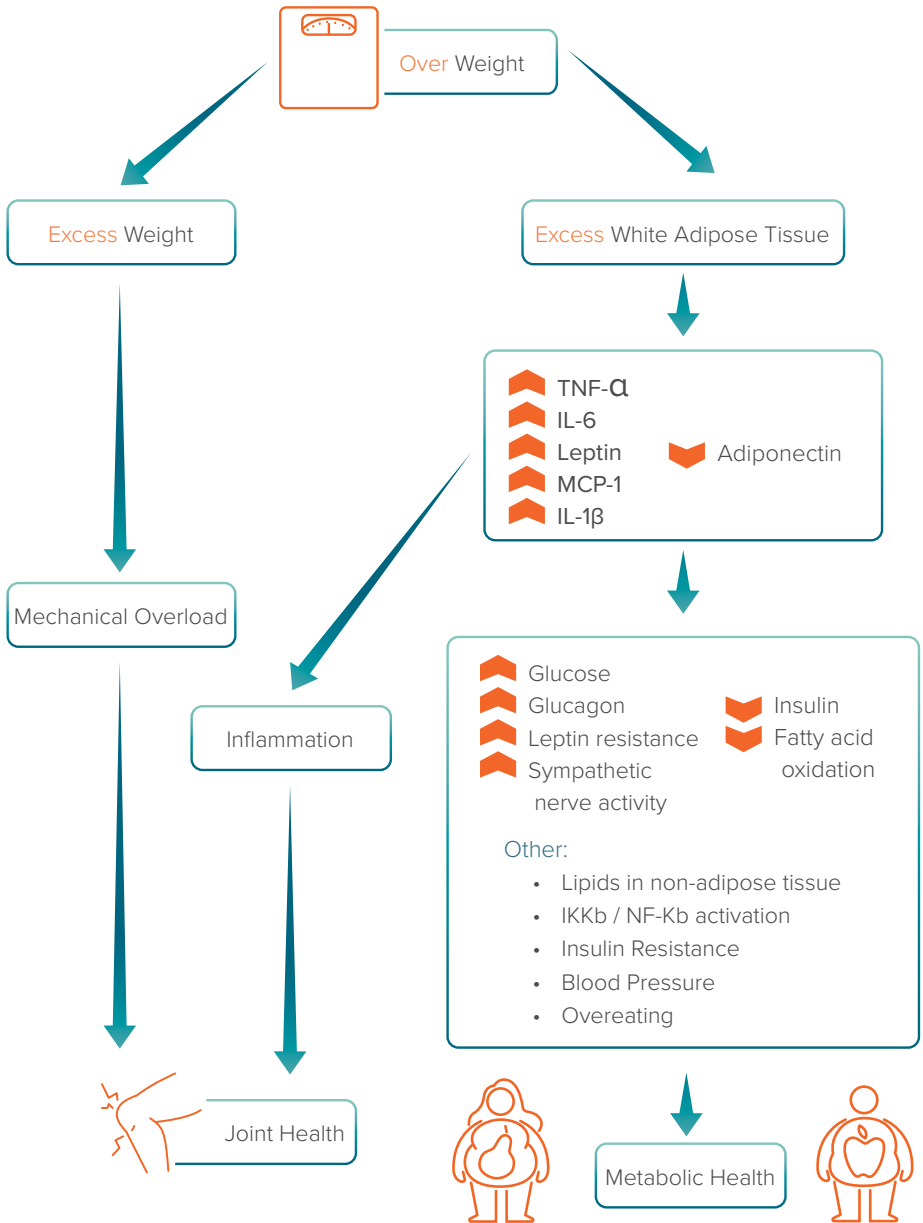

How Omne Diem™ Metabolic Support With Adiposano® Works

The concentrated Adiposano® complex works naturally to support metabolic health, joint comfort and weight management by supporting the reduction of white adipose tissue and modifying adipokine release.*

The Intersection of Joint and Metabolic Health

Omne Diem™ Metabolic Support with adiposano® contains a patented, unique glycosaminoglycan (GAG) complex rich in hyaluronic acid (HA)

Formula Benefits:

- Promotes adipokine homeostasis for metabolic health*
- Supports the reduction of White Adipose Tissue (WAT) for healthy weight management*
- Helps maintain healthy adipokine levels to support joint function and comfort*

Directions: Take 2 capsules in the morning.

DOES NOT CONTAIN:

Wheat	Gluten	Yeast
Soy	Dairy	Fish
Shellfish	Peanuts	Tree Nuts
Egg	GMO's	Artificial Colors
Artificial Sweeteners	Artificial Preservatives
